Missing Women in Indian Democracy

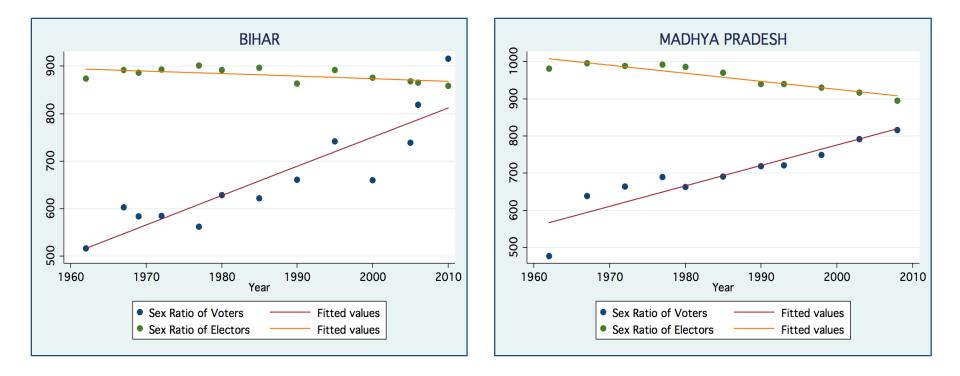

Shamika Ravi

Fellow, Development Economics | Brookings India

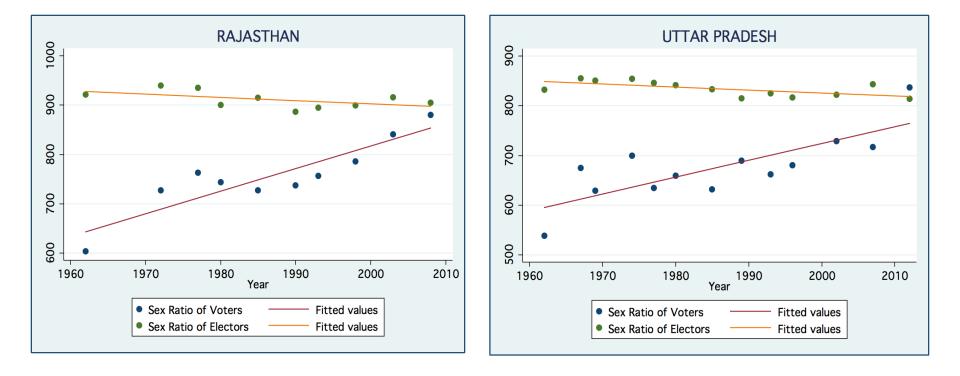

BROOKINGS INDIA BROOKINGS INDIA BROOKINGS INDIA BROOKI SINDIA BROOKINGS INDIA BROOKINGS INDIA

- Dramatic improvement in turnout of women voters compared to men in all the state elections from 1962 till 2012
- 1. There is a steady and a sharp decline in the gender bias in voting over time.
- The sex ratio of voters (number of women voters to every 1000 men voters) increased impressively from 715 in the 1960s to 883 in the 2000s.
- 3. This phenomenon of declining gender bias in voting is for all the states, including the "BIMARU" states.
- 4. Declining gender bias is solely driven by increase in women voter participation, while men voter participation has remained unchanged over time.

• Indian data

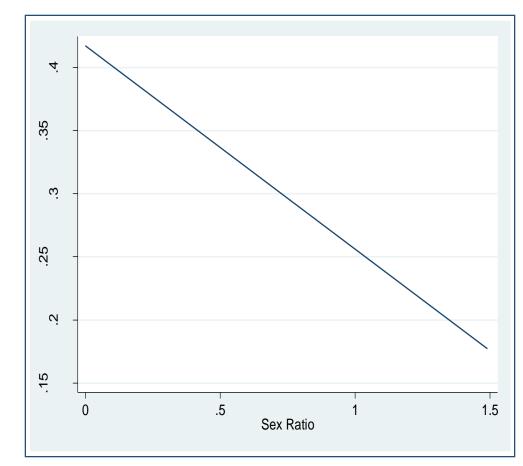

BROOKINGS INDIA BROOKINGS INDIA BROOKINGS INDIA BROOKI SINDIA BWhy so few women in politics? INCSINDIA

- Study women candidates in India
- State assembly elections data
- 50 years data (1962-2012)

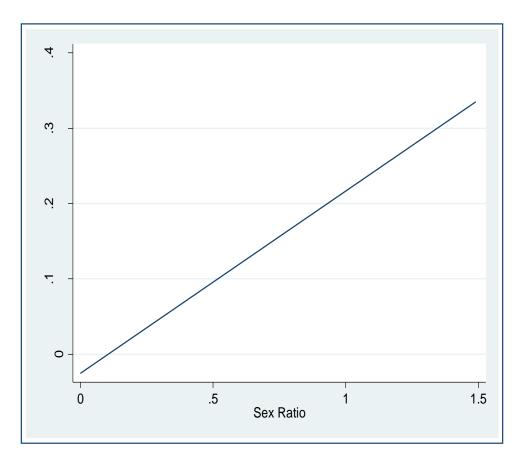

Where are women contesting elections?

- Result 1: women are more likely to contest elections in constituencies where sex ratio of electors is worse
- Probability of women contesting is much higher in backward states like Bihar, UP than in Kerala and TN
- In states with higher sex ratio – women seek representation through <u>voting</u>

BROOKINGS INDIA BROOKINGS INDIA BROOKINGS INDIA BROOKI Where are women winning elections?

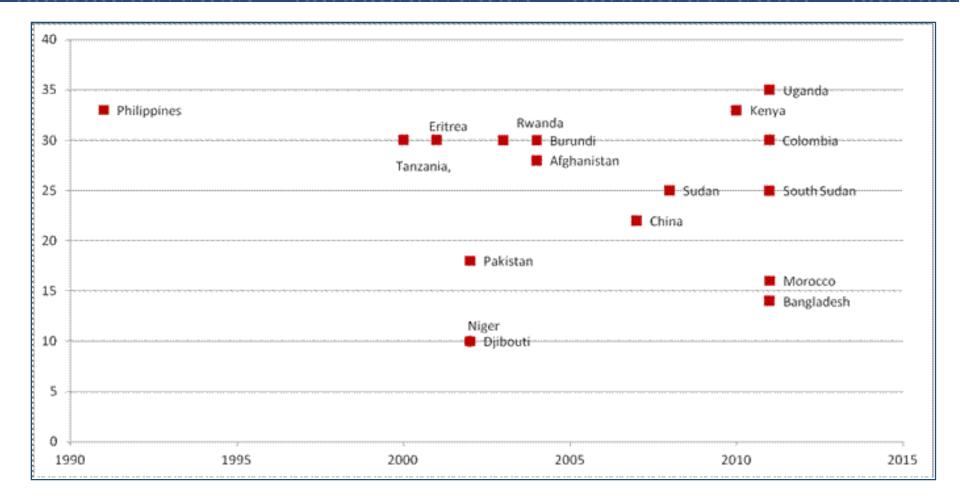

- Result 2: women have lower chances of winning elections in constituencies where sex ratio of electors is worse
- Socially advanced states = women don't contest
- Socially backward states = women contest but don't win
- Together the two results = few women political leaders overall

BROOKINGS INDIA BROOKINGS INDIA BROOKINGS INDIA BROOKI SINDIA BWomen's Reservation in India Incs India

- If the logic for reservation is <u>compensatory</u> <u>justice</u>
- 1. Then reservation should <u>not</u> be random
- 2. It should be targeted in those constituencies where the sex ratios are worst

Women's reservation in Parliaments

BROOKINGS INDIA BROOKINGS INDIA

3. Will reservations solve women's problems?

- Our estimates show that 20% of female electorate is "missing" in India (65 million)
- Indian elections reveal the will of a population that is artificially skewed against women
- The average Indian elector is a male
- Missing female electorate:
 - Partly because significant number of women not registered to vote (9.3% in UP and 5.7% in Bihar)
 - Largely because women are missing from the population sustained gross neglect of women over all age groups of life cycle

3. Will reservations solve women's problems?

- Women's reservation at Panchayat level mixed results for women's welfare
- Even with reservations women candidates will cater to the preferences of the average voter --who is male
- Competitive electoral process even in the presence of women's reservation, will perpetuate gender-biased policies
- This is akin to market failure of democracy

Making Indian democracy inclusive for women

- Possible partly by aggressive registration drive targeting women electors
- But largely dependent on correcting the sex ratio in the population
- Otherwise Indian democracy will fail its women citizens
