# Immigrants in 2010 Metropolitan America: A Decade of Change

Metropolitan Policy Program

Jill H. Wilson and Audrey Singer

at **BROOKINGS** 

# **FINDINGS**

Newly released data from the Census Bureau's 2010 American Community Survey on the foreign-born population show that:

• The foreign-born population in the United States reached 40 million in 2010, an increase of 8.8 million since 2000. Growth in the 2000s slowed from the rapid influx seen in the 1990s, the largest increase on record.

Immigrant settlement became less concentrated during the 2000s as metropolitan areas with relatively small immigrant populations grew quickly. The five U.S. metro areas with the largest number of immigrants housed 38 percent of U.S. foreign-born population in 2010, down from 43 percent in 2000. Twentyone (21) metropolitan areas gained at least 100,000 immigrants between 2000 and 2010; among those, Baltimore (72 percent), Orlando (72 percent), Las Vegas (71 percent), Atlanta (69 percent), and Riverside (52 percent) saw the fastest rates of growth.

In 2010, 51 percent of immigrants nationwide lived in the suburbs of large metropolitan areas, up from 48 percent in 2000. Immigrants within the largest metro areas remain somewhat less likely to live in the suburbs (61 percent) than overall population (69 percent).

Immigrants living in the United States in 2010 were more likely to have been in this country for a decade or more compared to those living here in 2000. Today's immigrants are also more likely to be U.S. citizens, to be born in Latin America, Asia, or Africa, and to be more educated than immigrants a decade ago. Not surprisingly, given the Great Recession, immigrants in 2010 were more likely to be poor than those in 2000.

During the first decade of the 21st century, immigrants continued to settle at a faster rate in newer, smaller metropolitan destinations and in suburban areas within metro areas. As the foreign-born population disperses to different destinations, localities, states and the nation will continue to face policy challenges on how to incorporate the new arrivals.

"As the foreign-born population disperses to different destinations, localities, states and the nation will continue to face policy challenges on how to incorporate the new arrivals."

# INTRODUCTION

U.S. immigration in the first decade of the 21st century is marked by slower growth than the record-breaking pace seen during the 1990s. This national trend belies metropolitan-level variation in settlement patterns and the suburbanization of immigrants.

This brief examines metropolitan settlement trends and the characteristics of immigrants in the 2000s, a period of fast immigrant growth in the first half of the decade, followed by a slowdown as the recession and higher unemployment rates prevailed. With the release of new data, trends in immigration over the full decade since the 2000 census become clearer.<sup>1</sup>

# METHODOLOGY

Using data from the U.S. Census Bureau's American Community Survey (ACS) and the decennial censuses, we present a picture for the nation as a whole. Much of our focus, however, is on the 100 largest metropolitan areas (as ranked by their 2010 census populations), differentiating primary cities from suburbs. We define primary cities as the largest city in each metropolitan area, plus other incorporated places with populations of at least 100,000. Across the 100 largest metro areas, a total of 137 primary cities are identified. For each metro area, "suburbs" or "suburban areas" are designated as the remainder of the metro area outside of primary cities.

We use "foreign born" and "immigrant" interchangeably to refer to anyone born outside the United States who was not a U.S. citizen at birth. This population includes naturalized citizens, legal permanent residents, temporary migrants, refugees, asylum seekers, and, to the extent to which they are counted, unauthorized immigrants.

# **FINDINGS**

# A. The foreign-born population in United States reached 40 million in 2010, an increase of 8.8 million since 2000.

In 2000, immigrants numbered 31.1 million and comprised 11.1 percent of the U.S. population. That year marked the end of a decade with the largest numerical increase in immigrants this country has ever experienced (Figure 1).

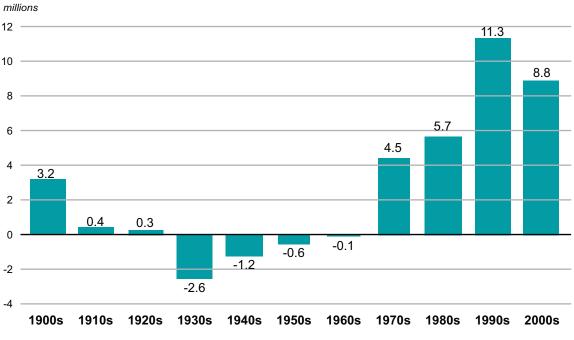

The first decade of the 21<sup>st</sup> century saw continued growth—with 8.8 million more immigrants living here in 2010 than 2000, a 28 percent increase. That growth, however, was slower than in the 1990s when the United States gained 11.3 million immigrants, a 57 percent increase between 1990 and 2000.

The growth of recent decades reverses and exceeds mid-century losses (Figure 1). Between 1930 and 1960, the number of immigrants in the U.S. dropped following slowed immigration from Europe. After major immigration reform passed in 1965 that opened the door to more immigrants from non-European countries, the foreign-born population began to grow again in the 1970s and 1980s before burgeoning in the 1990s. The growth in the 2000s represents something of a return to the upward trend established before the 1990s.

Much of the growth in the immigrant population during the 2000s happened prior to 2006, after which immigration slowed.<sup>2</sup> However, the last year of the decade may suggest a rebound. Recent estimates show an increase of approximately one million immigrants between 2009 and 2010.<sup>3</sup> Now numbering 40 million, the foreign-born population represents 12.9 percent of the nation's population, after hovering close to 12.5 percent each year since 2005.

# B. Immigrant settlement became less concentrated during the 2000s as metropolitan areas with relatively small immigrant populations grew quickly.

The five U.S. metropolitan areas with the largest foreign-born populations—New York, Los Angeles, Miami, Chicago, and Houston—loosened their grip on the nation's immigrants over the decade. They housed just

Source: Authors' calculations of U.S. Census Bureau data

38 percent of immigrants in 2010, compared to 43 percent in 2000.<sup>4</sup> Eighty-five percent of immigrants called the 100 largest metropolitan areas home in 2010 compared to 86 percent in 2000.

Nonetheless the number of immigrants living in the 100 largest metropolitan areas increased 27 percent in the 2000s. Metro areas experiencing the fastest growth rates were places that had relatively small immigrant populations. A swath of metro areas from Scranton stretching southwest to Indianapolis and Little Rock and sweeping east to encompass most of the Southeast and lower mid-Atlantic— including states and localities that have been flashpoints in the immigration debate—saw growth rates on the order of three times that of the 100-largest-metro-areas rate. These include Charlotte, Raleigh, Nashville, and Indianapolis, all of which passed the 100,000 mark for total foreign-born population by 2010 (see Map). In all, nine metropolitan areas experienced a doubling of their foreign-born populations in that decade alone (Table 1).

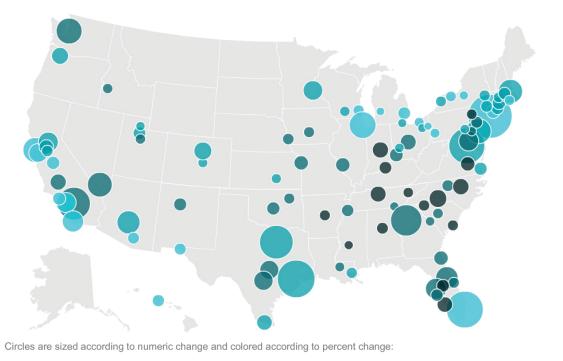

Twenty-one (21) metropolitan areas gained at least 100,000 immigrants between 2000 and 2010. Among those, Baltimore (72 percent), Orlando (71 percent), Las Vegas (71 percent), Atlanta (69 percent), and Riverside (52 percent) saw the fastest growth. New York, Houston, Miami, Washington, Dallas-Fort Worth, and Riverside saw the largest numerical gains with between 300,000 and 600,000 additional immigrants living there at the end of the decade (see Map).

The rank order of the 10 metropolitan areas with the largest immigrant populations changed only slightly over the decade, with Houston overtaking San Francisco for fifth place, and Boston surpassing San Diego for 10th. Among the top 20, Atlanta and Las Vegas made the biggest jumps, each rising two positions in rank between 2000 and 2010. Atlanta moved from 14<sup>th</sup> to 12<sup>th</sup>, and Las Vegas from 19<sup>th</sup> to 17<sup>th</sup>. A handful of metropolitan areas dropped one position in rank (see Appendix).

The 10 metropolitan areas with the highest *concentrations* of immigrants—where the foreign-born constitute the largest shares of population—remained almost identical from 2000 to 2010, with Fresno dropping off in favor of Stockton. Nonetheless, the rank order of these top metros of immigrant concentration shifted somewhat, with San Jose overtaking Los Angeles for the second-highest proportion of immigrants after Miami, which remained at the top with 38.8 percent of its population foreign born in 2010. In these three

Source: Census 2000 and ACS 2010

metro areas one out of every three persons is foreign-born. Los Angeles, McAllen, and El Paso all saw their percent foreign-born decline over the decade, while the rest of the top 15 metros experienced an increase.

The Washington, D.C. metro area saw the largest percentage point increase (4.5) in its share of population that is foreign born, from 17 percent in 2000 to 22 percent in 2010. Miami, Las Vegas, Houston, Riverside, and San Jose all saw their shares rise 3 percentage points or more. California metros continued to dominate the list for immigrant concentrations: 6 of the top 10 metros were in that state in both 2000 and 2010 (Table 2).

# C. By 2010, 51 percent of immigrants nationwide lived in the suburbs of large metropolitan areas, up from 48 percent in 2000.

Three decades ago, similar shares of immigrants lived in the cities and suburbs of the nation's largest metropolitan areas (41 and 43 percent respectively).<sup>5</sup> By 2000, 48 percent of all foreign born in the United States lived in suburbs of the 100 largest metropolitan areas while the percentage in cities had dropped to 38 percent. By 2010, the suburban share had climbed to 51 percent so that now a majority of immigrants in this country live in the suburbs of large metro areas. At the same time, 11 percent of immigrants live in smaller metropolitan areas, and almost 5 percent live in areas outside of metropolitan regions (Figure 2).

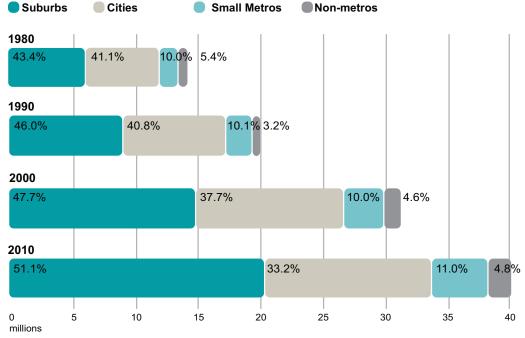

Within the largest metropolitan areas (i.e. excluding small metros and non-metro areas), 56 percent of immigrants lived in the suburbs in 2000; by 2010, that share had increased to 61 percent. In some metro areas, the share of immigrants living in the suburbs increased more dramatically. In the immigrant gateways of Houston, Minneapolis-St. Paul, Austin, and Dallas-Fort Worth, the share of immigrants living in the suburbs went up 10 percentage points between 2000 and 2010 (see Appendix).

Some metropolitan areas are more suburbanized than others, and immigrants' settlement patterns reflect that broader trend. The metro areas with the highest shares of their immigrants living in the suburbs in

### Table 2. Metropolitan Areas With the Highest Concentrations of Immigrants, 2010

Source: Census 2000 and ACS 2010

### Figure 2. Residence of the Foreign-born Population in the United States, 1980-2010

Note: Cities and suburbs are defined for the 95 largest metropolitan areas based on 2010 population. Primary cities are those that are first named in the metropolitan area title and any incorporated places that had at least 100,000 total population in 2010. The residual of the metro area is defined as suburban. In five of the 100 largest metropolitan areas, foreign-born population data at the city level are not available from the ACS. Thus, metro areas that are not in the top 95 are classified as "small metros."

Source: Author's analysis of decennial census and ACS 2010 data

2010 have high rates of suburbanization generally. In the Atlanta metro area, for example, 95 percent of immigrants live in the suburbs; so do 92 percent of all residents.

Some metro areas, however, stand out for their suburbanization of immigrants. In Modesto, CA, for example, 72 percent of immigrants live in the suburbs compared to 61 percent of the total metro population. Likewise, 24 percent of El Paso's immigrants live in the suburbs while 19 percent of the overall metro population does. In total, in 14 of the 100 largest metropolitan areas immigrants are more suburbanized than the total population (see right-most column of Appendix.)

On the contrary, in 78 of the 100 largest metro areas, immigrants are less likely to be suburbanized than the overall population.<sup>6</sup> In Nashville, for example, one-third of immigrants live in the suburbs compared to 59 percent of all residents. And in Charlotte, 38 percent of immigrants live in the suburbs compared to 58 percent of all residents. Overall, 69 percent of the population living in the largest metro areas are suburban residents compared to 61 percent of immigrants (see Appendix).

# D. Immigrants living in the United States in 2010 were more likely to have been in this country for a decade or more compared to those living here in 2000.

The slowing of immigration in the 2000s renders a smaller proportion of U.S. immigrants as recent arrivals. Immigrants in the United States in 2010 were more likely (65 percent) to have been in this country for a decade or more than immigrants living here in 2000 (58 percent). The longer tenure of present-day immigrants is reflected in their naturalization rates. In general, the longer immigrants live in the United States, the more likely they are to be eligible for, and apply for, U.S. citizenship. Thus, in 2010, 44 percent of the foreign-born population was a U.S. citizen, compared to 40 percent in 2000.

Other characteristics of the foreign-born have also changed as a result of recent flows. While immigrants' regions of birth shifted somewhat over the decade, Mexico remained the birthplace of the largest number of immigrants in this country by far (11.7 million), rising by 2.5 million in the 2000s. Nevertheless, the proportion of immigrants from Mexico was virtually the same at the end of the decade as it was at the beginning, about 29 percent. Those from other parts of Latin America and the Caribbean comprised a slightly higher share (24 percent) of immigrants in 2010 than in 2000 (22 percent).

The older European immigrant population registered the largest drop in its share of U.S. foreign born, from 16 percent in 2000 to 12 percent in 2010, amid a net loss of almost 100,000 immigrants. Though relatively small in number (1.6 million), immigrants born in Africa were the fastest-growing group over the decade, increasing in number by 83 percent and from just under 3 percent to 4 percent of U.S. immigrants. Asians grew 37 percent between 2000 and 2010, increasing their share of the immigrant population from 26 to 28. The addition of over 3 million Asian born represents just over one-third of the total increase in the immigrant population over the decade.

Immigrants living in the United States in 2010 are more educated than those here in 2000. In 2010, 27 percent of immigrants had a bachelor's degree or higher, whereas 24 percent did in 2000. Likewise, 32 percent of the foreign-born population in 2010 had not completed high school, compared to 33 percent in 2000.

Not surprisingly, the Great Recession increased poverty rates among immigrants and natives alike. Poverty rates among immigrants went up slightly over the decade, from 17.9 percent in 2000 to 18.8 percent in 2010. Among natives, poverty increased more, from 11.7 percent in 2000 to 14.8 percent in 2010.

# CONCLUSION

The first decade of the 21st century witnessed sustained —but slowed—growth in the foreign-born population in the United States. Immigrants continued to disperse to new areas of settlement across the country, with those from Latin America, Asia, and Africa increasing their share of the immigrant population.

In addition to moving to metro areas with little history of immigration, immigrants have increasingly settled in suburbs over cities. Job growth in the suburbs, affordable housing, good schools, and safe neighborhoods have attracted immigrants and natives alike to suburban areas. As a result, immigrant enclaves in central cities no longer dominate as the landing pad for new immigrants. Rather, newcomers often settle directly in the suburbs, joining family and friends there. The outcome is increased racial, ethnic, and linguistic diversity in the suburbs. Some places are embracing this phenomenon; others are resisting it and deflecting immigrants through punitive legislation.

The context for immigration has changed considerably since 2000. Economically, times were good at the beginning of the decade, and immigrants, for the most part, were viewed as assets to our labor force and society. Today, amid economic distress, unemployment, and shrinking public coffers, immigrants are more likely to be viewed as a drain on resources and as competitors for jobs. This is especially the case in places unaccustomed to or unprepared for new inflows of foreigners. On the other hand, in established immigrant gateways like New York or Chicago, or in places that want to attract immigrants to stem population loss—such as Detroit or Cleveland—immigrants are more likely to be welcomed.

Given an acrimonious Congress, the emotional nature of the immigration issue—especially in tough economic times— and the looming presidential campaign season, federal immigration legislation seems an unlikely prospect in the near future. In the meantime, a patchwork of state and local approaches will continue to address the benefits and challenges that confront people where they live, where they govern, and where budgets are made.

"-." indicates data on suburbs not available in 2010 due to city population total below ACS disclosure threshold
\* A location quotient value less than 1.00 indicates that immigrants are more likely to live in the suburbs than the population as a whole. A value less than 1.00 indicates that immigrants are less likely to live in the suburbs than the population as a whole ^ This figure does not include data for the five metro areas for which ACS data are unavailable at the city/suburban level

# **ENDNOTES**

- 1. The 2010 decennial census did not include any questions about place of birth, so data on the foreign-born population by metropolitan area must be obtained from the American Community Survey.
- Audrey Singer and Jill H. Wilson, "The Impact of the Great Recession on Metropolitan Immigration Trends" (Washington: Brookings Institution, 2010).
- 3. The 2010 ACS measures the foreign-born population at 40 million, which is 1.4 million more than the 2009 ACS estimate. The data from these two years are not strictly comparable because the ACS 2010 uses population weights based on the 2010 decennial census while the ACS 2009 is controlled to the 2000 decennial census. Using data from the 2009 and 2010 Current Population Survey (CPS), we calculate an increase of 850,000 immigrants in the U.S. The CPS does not include residents in prison, dormitories, and other institutionalized settings and therefore results in lower population totals compared to the ACS.
- 4. The top five metropolitan areas of immigrant settlement in 2000 were New York, Los Angeles, Miami, Chicago, and San Francisco. In 2010, Houston replaced San Francisco as home to the fifth-largest foreign-born population. We calculate the change in share of all immigrants between these two sets of five metros to show the change in concentration over time.
- 5. In five of the 100 largest metropolitan areas, foreign-born population data at the city level are not available from the ACS due to small sample sizes. In order to calculate the distribution of immigrants across community types, we classify immigrants living in these five metro areas as "small metropolitan" in all years. Thus, the city and suburban populations sum to the total of 95 metropolitan areas rather than the full 100.
- 6. ACS data are not available for the primary cities of five metro areas and, thus, we cannot calculate suburban settlement in these places. In addition, in three metro areas, immigrants are just as likely as the total population to live in the suburbs.

# ACKNOWLEDGEMENTS

The authors would like to thank the entire Communications team of the Metropolitan Policy Program, Susan Kellam and Chris Ingraham for their assistance on this report.

Brookings recognizes that the value it provides to any supporter is in its absolute commitment to quality, independence and impact. Activities supported by its donors reflect this commitment and the analysis and recommendations are not determined by any donation.

# About the State of Metropolitan America

The State of Metropolitan America is a signature effort of the Brookings Metropolitan Policy Program that portrays the demographic and social trends shaping the nation's essential economic and societal units—its large metropolitan areas and discusses what they imply for public policies to secure prosperity for these places and their populations.

Reports in the State of Metropolitan America series focus on five key dimensions of demographic transformation in the United States through the lens of these large metro areas: growth, diversity, aging, educational attainment, and income.

Visit the State of Metropolitan America, including an interactive demographic mapping tool for the nation's 50 states, 100 largest metro areas, and their cities and suburbs online at: www.brookings.edu/metroamerica

# About the Metropolitan Policy Program at the Brookings Institution

Created in 1996, the Brookings Institution's Metropolitan Policy Program provides decision makers with cutting-edge research and policy ideas for improving the health and prosperity metropolitan areas including their component cities, suburbs, and rural areas.
