Notes: Panel A shows total net debt for each group of countries. Panel B shows total net debt of each group of countries expressed as a ratio of total nominal GDP of that group (all in current prices and expressed in U.S. dollars at market exchange rates based on IMF data). Panels C and D show, for each group of countries, ratios of total net debt relative to total population and total working-age population, respectively. Working-age population comprises individuals in the 15-64 age range. We exclude Norway, which has a large negative net debt position, from the list of advanced economies. The group of G-20 advanced economies are the 19 official member countries of the G-20 that the IMF classifies as advanced economies. We use net debt data for all countries for which it is available; for the remainder, we use gross debt data in place of net debt.
