Since 2014, Brookings has developed and maintained a comprehensive database on the global impact bonds market. The data here represent a snapshot from that database and are updated each month.

As a note, there are a number of projects globally which use the term “impact bond” which don’t meet our definition of an impact bond, which is a series of contractual agreements which ensure:

• Payment for social or environmental outcomes achieved;
• Up-front repayable finance provided to the service provider by a third party, the repayment of which is (at least partially) conditional on achieving specified outcomes.

Additionally, the counting of impact bonds may vary depending on the project, leading to some discrepancies in total numbers. Some sources, for example, may count a project that has expanded to multiple municipalities as one impact bond, while in others they may be counted as multiple.
